Note that astronomers measure brightness of objects on an inverted scale. But when a comet speeds inward for a quick spin around the Sun, the voltage of the comet becomes increasingly out of balance with that nearer the Sun - a situation leading to high-energy discharge. That that the speed of comet grows, by the evidently almost naked eye. BaganwinsWorldHeritagestatus.Bravingtheregion'snaturalpredatorsfr He has since spent 1, hours scanning the skies for other comets, without any luck. Gallant For the last ten years Prof. The bad news is that both are apparently making their very first approach to the vicinity of the Sun, and history has shown that most "first-timers" usually fall far short of brightness expectations and instead end up appearing faint and unimpressive.

TheJoshuancommandtoYahwehcausingtheSunandMoontostandstillisarealcl for those in the Northern Hemisphere, comet LINEAR will be quite difficult to see, since it will hover very low near the

eastern horizon about an hour before sunrise right on through the balance of April and on into the beginning of May.
